Subject: Database Formalities

Hi Adan,

I am just writing you an e-mail to follow up from our meeting yesterday.

My current project is focused on transposing SSATS based test results into a format suitable for globally agreed database schema.

I just wanted to confirm some details based on our discussion from yesterday:

- Firstly, we need to decide on a field in the LabVIEW database in which will enable us to denote test results as derived from SSATS. I believe that the MAIN_TEST_GUI_FILENAME was raised as a potential candidate. Could you confirm if this would be suitable, and also that this field may be subject to changes in the future? **MAIN_TEST_GUI_FILENAME** and **MAIN_TEST_GUI_VERSION** are the correct columns. Refer to my email from yesterday with subject **UUT_RESULT table columns discussed in this week's S/W Standardization Mtg.**
- Secondly was concerning the nomenclature to be used in regard to the data itself. I seem to remember a point being brought up that for example "Pass" should be corrected to "Passed". I understand this can be grouped in Power BI visualisations, however I need to remain vigilant and ensure that data written to our database is correct. Could you confirm if this change is required, and any other potential changes that may be required? **The PowerBI reports can handle test statuses of "Pass", "Passed", "Fail", and "Failed".** I would use the test status used in your legacy software to keep it standardized for your site.

Regards
